Meteorological Situation

A deep low-pressure system is positioned over the northern Atlantic, with its centre just south of Iceland. Another deep low is located over northeastern Europe. In between, an elongated area of shallow high pressure extends northward from France across the North Sea towards the Norwegian Sea. A frontal zone associated with the Atlantic low will gradually move eastward towards the British Isles. Several smaller low-pressure centres are expected to develop along this front. As the frontal system approaches, winds will increase on Tuesday and Wednesday. Local conditions next 72 hrs: Wind: SSE-ly, fresh, increasing to strong breeze (risk for near gale). Sea temperature: 10-11C.

Warnings (next 24 Hours)
