

Meteorological Situation

A strong high-pressure system over the northern Atlantic is expected to remain nearly stationary during the coming days. Meanwhile, low pressure over the Baltic States will gradually fill later this evening. An associated trough extends westward across the Baltic Sea into Denmark. During the coming night, a secondary low is expected to develop along this trough before moving south-eastward over the Baltic Sea on Thursday. Toward the weekend, this low will move away into western Russia. In its wake, a ridge of high pressure will expand eastward across the UK and the North Sea. Local conditions next 72 hrs: Wind: WNW-ly, fresh breeze. Sea temperature: 13-14C.

Warnings (next 24 Hours)
